Art Unit: 1714

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 14-28 and 40-44 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 14 and 40 as well as dependent claims are indefinite and incomplete since monofunctional mercaptan for (a) (II) "about 100 ppm to about 2000 ppm –" is missing.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 4, 5, 7, 8, 11-20, 23-29, 32, 33, 35, 36, 39-45, 48-50 and 53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuo et al (US 6,534,598) in view of JP 20-75669.

Kuo et al teach an ambient oxidative cure composition based on an acrylate functional-alkyd resin in abstract and examples. Said examples show the instant monomers for the alkyd resin and additional non-functionalized alkyd resins and solvent. Kuo et al further teach employing various additives at col. 6, lines 33-47.

The instant invention further recites employing a monofunctional mercaptan over kuo et al. JP teaches a coating composition comprising an oxidation stable alkyd resin and coupling agent, gamma-mercaptopropyl-trimethyoxysilane, meeting the instant mercaptan in abstract.

It would have been obvious to one skilled in the art to employ said gamma-mercaptopropyl-trimethyoxysilane of JP in Kuo et al since Kuo et al further teach employing various additives and since the use of a coupling agent in order to improve compatibility of coating components is a routine practice in the art as taught by JP.

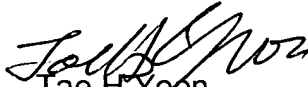

Claims 2, 3, 6, 9, 10, 30, 31, 34, 37, 39, 46, 47, 51 and 52 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
